

King's Wood, Winscombe: 24 April 2016

Fungi can be somewhat scarce in April and this foray was no exception with only 17 species recorded, with several being plant pathogenic fungi.. The highlight of the day was to see a rare Violet oil beetle (*Meloe violaceus*) (Right) running across the path in front of us.

Auricularia auricula-judae
Camarographium stephensii
Colletotrichum trichellum
Coprinellus micaceus
Daldinia concentrica
Flammulina velutipes
Hypoxylon fuscum
Kretzschmaria deusta
Micropodia pteridina

Peniophora quercina
Pyrenopeziza rubi
Ramularia purpurascens
Reticularia lycoperdon
Rhopographis filicinus
Trametes pubescens
Trametes versicolor
Trichia botrytis

Coprinellus micaceus growing inside a rotten tree trunk

Trichia botrytis, a common Myxomycete
