

## Goblin Combe: 26 April 2017

30 species were found, but only one gilled mushroom – *Flammulina velutipes*. The rest were brackets on wood or plant pathogenic species, especially rust fungi, on various leafy hosts. The more interesting species are described below.

*Auricularia auricula-judae*  
*Bjerkandera adusta*  
*Daldinia concentrica*  
*Ditiola (Femsjonina)peziziformis*  
*Flammulina velutipes*  
*Hormotheca robertiana*  
*Hyaloscypha fuckelii/hyalina*  
*Hymenochaete corrugata*  
*Hymenochaete rubiginosa*  
*Hyphodontia sambuci*

*Hypoxylon fragiforme*  
*Inonotus dryadeus*  
*Kretzschmaria deusta*  
*Kuehneola uredinis*  
*Melampsora hypericorum*  
*Melampsora symphyti*  
*Milesina scolopendrii*  
*Peniophora limitata*  
*Polyporus squamosus*  
*Puccinia buxi*

*Puccinia caricina*  
*Puccinia sessilis* on Arum  
*Puccinia sessilis* on Allium  
*Ramularia rubella*  
*Stereum hirsutum*  
*Trametes versicolor*  
*Uromyces dactylidis*  
*Uromyces muscari*  
*Xylaria carpophila*  
*Xylaria hypoxylon*

***Hormotheca robertiana*** – a minute perithecial fungus on leaves of Herb Robert (*Geranium robertianum*).

***Hyaloscypha* sp.** – another with very small fruiting bodies, on rotten wood with spear-like, sometimes septate hairs.

*Uromyces muscari* – Bluebell Rust
