

# Fungi found in Late September

*Agaricus impudicus*

*Agrocybe cylindracea* (from Jean)

*Amanita strobiliformis*, a large robust species

Ash Die Back causing devastation in a Quantocks Wood

*Armillaria mellea* (Honey Fungus)

*Chlorociboria aeruginascens*

*Imleria (Boletus) badia* (Bay Bolete)

*Chlorophyllum rhacodes*

*Echinoderma perplexa*

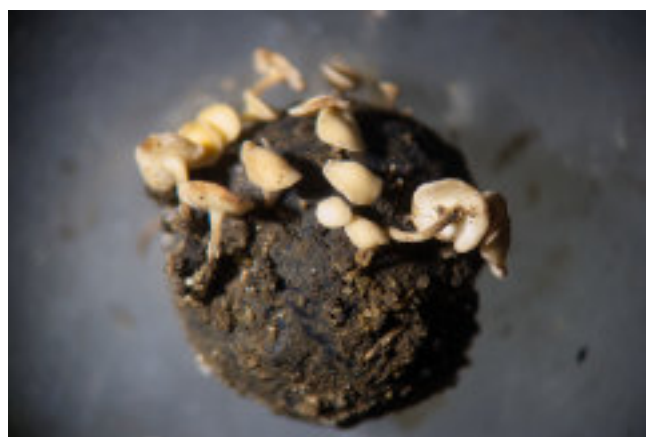

*Hypholoma fasciculare*

*Macrolepiota procera*, a Parasol Mushroom, common in longer grass

*Hymenoscyphus fructigenus* on a hazel nut

***Meripilus giganteus***: a cluster of the Giant Polypore, 40 cm across

***Mycena haematopus***, readily identified from the “blood” that seeps from the stipe when broken

***Pholiota adiposa***, growing from the end of a felled tree

***Pholiotina arrhenii***, a small (3mm) but beautiful species
